Salesforce Developer Catalyst Self-Learning & Super Badges

➤ Salesforce Developer-Self Learning

1) Salesforce Fundamentals & User Setup
2) Relationships & ProcessAutomation
3) Flows & Security
4) Apex,Testing And Debugging
5) Integration

➤ Apex Specialist - Superbadge

1) Apex Triggers

- **Get started with apex triggers**
- ➩ **Code :**

```
trigger AccountAddressTrigger on Account (before insert,before update) {
for(Account a:Trigger.New){        if(a.Match_Billing_Address__c==true){
a.ShippingPostalCode=a.BillingPostalCode;
      }
 }
}
```

- Bulk Apex Triggers
- ➩ Code :

```
trigger ClosedOpportunityTrigger on Opportunity (before insert, before update) {
List<Task> taskList = new List<Task>();
```

```
//If an opportunity is inserted or updated with a stage of 'Closed Won'
   // add a task created with the subject 'Follow Up Test Task'.
  for (Opportunity opp : Trigger.new)
  {      //add a task with subject 'Follow Up Test Task'.
    if(opp.StageName == 'Closed Won')
     taskList.add(new Task(Subject='Follow Up Test Task', WhatId = opp.id ));                }
if (taskList.size() > 0)
   {       insert taskList;
    }
}
```

2) Apex Testing

- **Get Started With Apex Triggers**

➠ **Code** :

```
    @isTest
private class TestVerifyDate {
   static testMethod void TestVerifyDate() {
     VerifyDate.CheckDates(System.today(),System.today().addDays(10));
      VerifyDate.CheckDates(System.today(),System.today().addDays(78));
   }
}
```

- **Test Apex Triggers**

➠ **Code** :

```
      @IsTest
public class TestRestrictContactByName {
   @IsTest static void createBadContact(){

      Contact c=new Contact(Firstname='John',LastName='INVALIDNAME');

      Test.startTest();
      Database.SaveResult result = Database.insert(c, false);
      Test.stopTest();

      System.assert(!result.isSuccess());
   }
```

}

- **Creating Test Data For Apex Tests**

➠ **Code :**

```
public class RandomContactFactory{
public static List<Contact> generateRandomContacts(integer n,stringLastName){
 integer n1=n;
 List<contact> c1 = new list<contact>();
  list<contact> c2 =new list<contact>();
  c1 = [select FirstName from Contact Limit : n1];
  integer i=0;
 for(contact cnew : c1){
   contact cnew1 = new contact();
 cnew1.firstname = cnew.firstname + i;
 c2.add(cnew1);
  i++;
   }
 return c2;
  }
}
```

3) Asynchronous Apex

- **Use Future Methods**

➠ **Code** :

```
    //AccountProcessor class

     public class AccountProcessor {
    @future
    public static void countContacts(List<Id> accountIds){
  List<Account> accounts = [Select Id, Name from Account Where Id IN :   ];
 List<Account> updatedAccounts = new List<Account>();
 for(Account account : accounts){
   account.Number_of_Contacts__c = [Select count() from Contact Where AccountId
=: account.Id];
    System.debug('No Of Contacts = ' + account.Number_of_Contacts__c);
    updatedAccounts.add(account);
```

```
        }
        update updatedAccounts;
    }

}

//AccountProcessorTest Class

@isTest
public class AccountProcessorTest {
    @isTest
    public static void testNoOfContacts(){
        Account a = new Account();
        a.Name
 = 'Test Account';
        Insert a;
        Contact c = new Contact();
        c.FirstName = 'Bob';
        c.LastName =  'Willie';
        c.AccountId = a.Id
;
        Contact c2 = new Contact();
        c2.FirstName = 'Tom';
        c2.LastName = 'Cruise';
        c2.AccountId = a.Id
;
        List<Id> acctIds = new List<Id>();
        acctIds.add(a.Id);
        Test.startTest();
        AccountProcessor.countContacts(acctIds);
        Test.stopTest();
    }

}
```

- **Use Batch Apex**

➔ **Code :**

```
        global class LeadProcessor implements Database.Batchable<sObject> {
    global Integer count = 0;

  global Database.QueryLocator start(Database.BatchableContext bc){
    return Database.getQueryLocator('SELECT ID, LeadSource FROM Lead');
  }

  global void execute(Database.BatchableContext bc, List<Lead> L_list){
    List<lead> L_list_new = new List<lead>();

    for(lead L:L_list){
      L.leadsource = 'Dreamforce';
      L_list_new.add(L);
      count += 1;
    }
    update L_list_new;
  }
  global void finish(Database.BatchableContext bc){
    System.debug('count = '+count);
  }
}
```

- **Control Processes With Queueable Apex**

➔ **Code :**

```
        public class AddPrimaryContact implements Queueable {
  public contact c;
  public String state;

  public AddPrimaryContact(Contact c, String state) {
    this.c = c;
    this.state = state;
  }

  public void execute(QueueableContext qc) {
    system.debug('this.c = '+this.c+' this.state = '+this.state);
    List<Account> acc_lst = new List<account>([select id, name, BillingState from
```

```
account where account.BillingState = :this.state limit 200]);
        List<contact> c_lst = new List<contact>();
        for(account a: acc_lst) {
            contact c = new contact();
            c = this.c.clone(false, false, false, false);
            c.AccountId = a.Id;
            c_lst.add(c);
        }
        insert c_lst;
    }

}
```

Add primaryContactTest :

```
      public class AddPrimaryContact implements Queueable {
    public contact c;
    public String state;

    public AddPrimaryContact(Contact c, String state) {
        this.c = c;
        this.state = state;
    }

    public void execute(QueueableContext qc) {
        system.debug('this.c = '+this.c+' this.state = '+this.state);
        List<Account> acc_lst = new List<account>([select id, name, BillingState from
account where account.BillingState = :this.state limit 200]);
        List<contact> c_lst = new List<contact>();
        for(account a: acc_lst) {
            contact c = new contact();
            c = this.c.clone(false, false, false, false);
            c.AccountId = a.Id;
            c_lst.add(c);
        }
        insert c_lst;
    }
```

}

- Schedule Jobs Using the Apex Schedular

➡ Code :

Apex Class

```
global class DailyLeadProcessor implements Schedulable{
   global void execute(SchedulableContext ctx){
      List<Lead> leads = [SELECT Id, LeadSource FROM Lead WHERE LeadSource = ''];

      if(leads.size() > 0){
         List<Lead> newLeads = new List<Lead>();

         for(Lead lead : leads){
            lead.LeadSource = 'DreamForce';
            newLeads.add(lead);
         }

         update newLeads;
      }
   }
}
```

Apex Test Class

```
@isTest
private class DailyLeadProcessorTest{
   //Seconds Minutes Hours Day_of_month Month Day_of_week optional_year
   public static String CRON_EXP = '0 0 0 2 6 ? 2022';

   static testmethod void testScheduledJob(){
      List<Lead> leads = new List<Lead>();

      for(Integer i = 0; i < 200; i++){
         Lead lead = new Lead(LastName = 'Test ' + i, LeadSource = '', Company = 'Test
Company ' + i, Status = 'Open - Not Contacted');
```

```
            leads.add(lead);
        }

        insert leads;

        Test.startTest();
        // Schedule the test job
        String jobId = System.schedule('Update LeadSource to DreamForce', CRON_EXP,
new DailyLeadProcessor());

        // Stopping the test will run the job synchronously
        Test.stopTest();
    }
}
```

4) Apex Integration Services

- **Apex REST Callouts**
- **Code :**

```
 AnimalLocator
 public class AnimalLocator {
        public class cls_animal {
                public Integer id;
                public String name;
                public String eats;
                public String says;
        }
public class JSONOutput{
        public cls_animal animal;

        //public JSONOutput parse(String json){
        //return (JSONOutput) System.JSON.deserialize(json, JSONOutput.class);
        //}
}

    public static String getAnimalNameById (Integer id) {
```

```
        Http http = new Http();
        HttpRequest request = new HttpRequest();
        request.setEndpoint('https://th-apex-http-callout.herokuapp.com/animals/' + id);
        //request.setHeader('id', String.valueof(id)); -- cannot be used in this challenge :)
        request.setMethod('GET');
        HttpResponse response = http.send(request);
        system.debug('response: ' + response.getBody());
        //Map<String,Object> map_results = (Map<String,Object>)
JSON.deserializeUntyped(response.getBody());
        jsonOutput results = (jsonOutput) JSON.deserialize(response.getBody(),
jsonOutput.class);
        //Object results = (Object) map_results.get('animal');
                    system.debug('results= ' + results.animal.name);
        return(results.animal.name);
    }

}
```

AnimalLocatorMock

```
@IsTest
global class AnimalLocatorMock implements HttpCalloutMock {

    global HTTPresponse respond(HTTPrequest request) {
        Httpresponse response = new Httpresponse();
        response.setStatusCode(200);
        //-- directly output the JSON, instead of creating a logic
        //response.setHeader('key, value)
        //Integer id = Integer.valueof(request.getHeader('id'));
        //Integer id = 1;
        //List<String> lst_body = new List<String> {'majestic badger', 'fluffy bunny'};
        //system.debug('animal return value: ' + lst_body[id]);
        response.setBody('{"animal":{"id":1,"name":"chicken","eats":"chicken
food","says":"cluck cluck"}}');
        return response;
    }

}
```

AnimalLocatorTest.cls

```
@IsTest
public class AnimalLocatorTest {
   @isTest
   public static void testAnimalLocator() {
      Test.setMock(HttpCalloutMock.class, new AnimalLocatorMock());
      //Httpresponse response = AnimalLocator.getAnimalNameById(1);
      String s =  AnimalLocator.getAnimalNameById(1);
      system.debug('string returned: ' + s);
   }

}
```

- **Apex Soap Callouts**
  - **Code :**

Apex Service

```
//Generated by wsdl2apex

    @HttpGet
    global static Account getAccount() {
        RestRequest req = RestContext.request;
        String accId = req.requestURI.substringBetween('Accounts/', '/contacts');
        Account acc = [SELECT Id, Name, (SELECT Id, Name FROM Contacts)
                       FROM Account WHERE Id = :accId];
        return acc;
    }
}
```

⭐ Skills Learnt During Completion Of The Superbadge

- **How to Automate record creation using Apex triggers**

➡ **Code** :

MaintenanceRequestHelper.apxc

```
public with sharing class MaintenanceRequestHelper {
    public static void updateworkOrders(List<Case> updWorkOrders, Map<Id,Case>
nonUpdCaseMap) {
        Set<Id> validIds = new Set<Id>();

        For (Case c : updWorkOrders){
            if (nonUpdCaseMap.get(c.Id).Status != 'Closed' && c.Status == 'Closed'){
                if (c.Type == 'Repair' || c.Type == 'Routine Maintenance'){
```

```
                validIds.add(c.Id);

            }
        }
    }

    if (!validIds.isEmpty()){
        List<Case> newCases = new List<Case>();
        Map<Id,Case> closedCasesM = new Map<Id,Case>([SELECT Id, Vehicle__c,
Equipment__c, Equipment__r.Maintenance_Cycle__c,(SELECT
Id,Equipment__c,Quantity__c FROM Equipment_Maintenance_Items__r)
                                        FROM Case WHERE Id IN :validIds]);
        Map<Id,Decimal> maintenanceCycles = new Map<ID,Decimal>();
        AggregateResult[] results = [SELECT Maintenance_Request__c,
MIN(Equipment__r.Maintenance_Cycle__c)cycle FROM
Equipment_Maintenance_Item__c WHERE Maintenance_Request__c IN :ValidIds GROUP
BY Maintenance_Request__c];

    for (AggregateResult ar : results){
        maintenanceCycles.put((Id) ar.get('Maintenance_Request__c'), (Decimal)
ar.get('cycle'));
    }

        for(Case cc : closedCasesM.values()){
            Case nc = new Case (
                ParentId = cc.Id,
            Status = 'New',
                Subject = 'Routine Maintenance',
                Type = 'Routine Maintenance',
                Vehicle__c = cc.Vehicle__c,

            wpClone.Maintenance_Request__c = nc.Id;
              ClonedWPs.add(wpClone);

            }
          }
          insert ClonedWPs;
      }
    }
}
```

MaitenanceRequest.apxt

```
 trigger MaintenanceRequest on Case (before update, after update) {
    if(Trigger.isUpdate && Trigger.isAfter)
MaintenanceRequestHelper.updateWorkOrders(Trigger.New, Trigger.OldMap);   }
```

- **Synchronize Salesforce data with an external system using asynchronous REST callouts.**

- **Code:**

WarehouseCalloutService.apxc :-

```
public with sharing class WarehouseCalloutService implements Queueable {
    private static final String WAREHOUSE_URL = 'https://th-superbadge-apex.herokuapp.com/equipment';

    //class that makes a REST callout to an external warehouse system to get a list of equipment that needs to be updated.
    //The callout's JSON response returns the equipment records that you upsert in Salesforce.

    @future(callout=true)
    public static void runWarehouseEquipmentSync(){
        Http http = new Http();
        HttpRequest request = new HttpRequest();

        request.setEndpoint(WAREHOUSE_URL);
        request.setMethod('GET');
        HttpResponse response = http.send(request);

        List<Product2> warehouseEq = new List<Product2>();

        if (response.getStatusCode() == 200){
            List<Object> jsonResponse = (List<Object>)JSON.deserializeUntyped(response.getBody());
            System.debug(response.getBody());

            //class maps the following fields: replacement part (always true), cost, current inventory, lifespan, maintenance cycle, and warehouse SKU
            //warehouse SKU will be external ID for identifying which equipment records to update within Salesforce
            for (Object eq : jsonResponse){
                Map<String,Object> mapJson = (Map<String,Object>)eq;
                Product2 myEq = new Product2();
                myEq.Replacement_Part__c = (Boolean) mapJson.get('replacement');
                myEq.Name = (String) mapJson.get('name');
```

```
            myEq.Maintenance_Cycle__c = (Integer) mapJson.get('maintenanceperiod');
            myEq.Lifespan_Months__c = (Integer) mapJson.get('lifespan');
            myEq.Cost__c = (Integer) mapJson.get('cost');
            myEq.Warehouse_SKU__c = (String) mapJson.get('sku');
            myEq.Current_Inventory__c = (Double) mapJson.get('quantity');
            myEq.ProductCode = (String) mapJson.get('_id');
            warehouseEq.add(myEq);
        }

        if (warehouseEq.size() > 0){
            upsert warehouseEq;
            System.debug('Your equipment was synced with the warehouse one');
        }
    }
  }

  public static void execute (QueueableContext context){
    runWarehouseEquipmentSync();
  }

➤ Process Automation Specialist - SuperBadge

1)Formulas And Validations
2)Salesforce Flow
3)Leads & Opportunities For Lightning Experience

★ Skills Learnt During Completion Of Super badge

- Automate lead ownership using assignment rules
- Enforce data integrity with formula fields and validation rules
- Create a custom object in a master-detail relationship to a standard object
- Define an opportunity sales process using stages, record types, and validation rules
- Automate business processes to send emails, create related records, and submit opportunities for approval
- Create a flow to display dynamic information on a Lightning record page
- Create a process to evaluate and update records
